

### STCU Ponderay – Landscaping Plan

The landscaping at the proposed STCU Bonner site at the northeast corner of US Highway 95 and Kootenai Cutoff Road will consist primarily of standard grass. Small planting areas are being considered adjacent to the main arterials, utilizing native plant species and taller grasses such as Buffalo grass plugs. A number of small boulders may be placed within planter areas, as well.

A detailed landscape plan is not planned for inclusion in the site permit application package, as the design is going to be 'design-build', a responsibility of the general contractor who is ultimately awarded the contract.
